

adaptive immune response based on somatic recombination of immune receptors built from immunoglobulin superfamily domains

T cell activation
negative regulation of immune system process
regulation of cell–cell adhesion
lymphocyte differentiation
leukocyte cell–cell adhesion
regulation of immune effector process
regulation of multi–organism process
interspecies interaction between organisms
positive regulation of cell adhesion
regulation of leukocyte cell–cell adhesion
regulation of hemopoiesis
response to virus
symbiont process
regulation of T cell activation
defense response to virus
T cell differentiation
viral process
negative regulation of cell activation
positive regulation of cell–cell adhesion
negative regulation of leukocyte activation
regulation of viral process
negative regulation of cell–cell adhesion
negative regulation of lymphocyte activation
alpha–beta T cell activation
